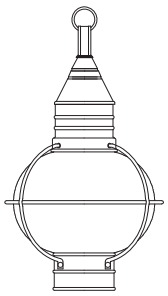
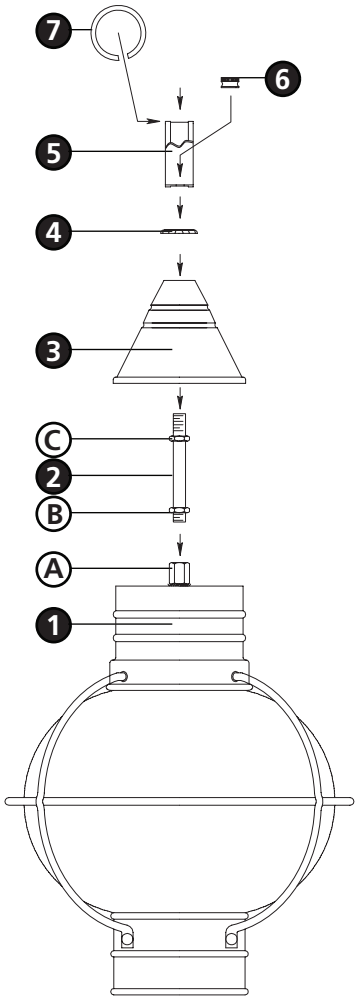
assembly instructions

2202

Item No. 2202



Drawing 1 - Fixture Assembly



start here

1

1. Find a clear area in which you can work.

2. Unpack fixture and glass from carton.

3. Carefully review instructions prior to assembly.

****** The construction of this fixture will be accomplished by first assembling the the main body of the fixture, making all necessary electrical connections, and then hanging the fixture from the ceiling.***

SAFETY WARNING: READ WIRING AND GROUNDING INSTRUCTIONS (I.S. 18) AND ANY ADDITIONAL DIRECTIONS. TURN POWER SUPPLY OFF DURING INSTALLATION. IF NEW WIRING IS REQUIRED, CONSULT A QUALIFIED ELECTRICIAN OR LOCAL AUTHORITIES FOR CODE REQUIREMENTS.

2

1. The top assembly of the fixture comes assembled. In order to assemble the fixture the following must be taken apart: remove center tubing **(2)** from cone **(3)** by removing cap **(5)** - see **Drawing 1**.

2. Slip center tubing **(2)** onto supply wire and thread into coupler **(A)** on top of the main body **(1)**, approximately 3/8".

3. Tighten hex nut **(B)** against coupler **(A)** to lock center tubing in place.

4. Slip cone **(3)** over supply wire and onto tubing **(2)**.

5. Adjust hex nut **(C)** so it touches the inside top of the cone **(3)** when base of cone touches the top of the fixture body.

6. Slip decorative check ring **(4)** over supply wire and onto center tubing **(2)**.

7. Slip ring **(5)** over supply wire and onto center tubing **(2)**.

8. Thread top cap **(6)** over supply wire and onto center tubing **(2)** and tighten.

9. Spread hanging ring **(7)** and slip over ring **(6)** and close gap in ring **(7)** to prevent it from slipping off the fixture and attach chain to ring **(7)**.

10. Please refer to hanging Instruction Sheet **(I.S. 19**) provided to hang fixture.

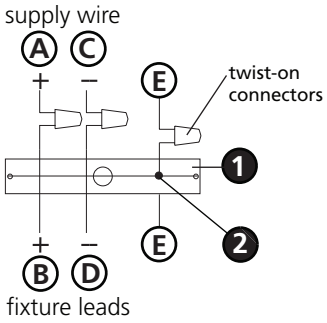
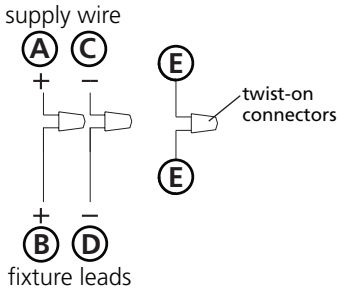
Drawing 2 - Chain Hung



Drawing 3 - Post-Mount



wiring instructions

Indoor Fixtures

1. Connect positive supply wire **(A)** (typically black or the smooth, unmarked side of the two-conductor cord) to positive fixture lead **(B)** with appropriately sized twist on connector - see **Drawings 1 or 2**.

2. Connect negative supply wire **(C)** (typically white or the ribbed, marked side of the two-conductor cord) to negative fixture lead **(D)**.

3. Please refer to the **grounding instructions** below to complete all electrical connections.

Outdoor Fixtures

1. Connect positive supply wire **(A)** (typically black or the smooth unmarked side of the two-conductor cord) to positive fixture lead **(B)** with appropriately sized twist on connector - see **Drawings 2 or 3**.

2. Connect negative supply wire **(C)** (typically white or the ribbed, marked side of the two-conductor cord) to negative fixture lead **(D)**.

3. Cover open end of connectors with silicone sealant to form a watertight seal.

• If installing a wall mount fixture, use caulk to seal gaps between the fixture mounting plate (backplate) and the wall. This will help prevent water from entering the outlet box. If the wall surface is lap siding, use caulk and a fixture mounting platform specially.

4. Please refer to the **grounding instructions** below to complete all electrical connections.

grounding instructions

Flush Mount Fixtures
For positive grounding in a 3-wire electrical system, fasten the fixture ground wire **(E)** (typically copper or green plastic coated) to the fixture mounting strap **(1)** with the ground screw **(2)** - see **Drawing 1**.
Note: On straps for screw supported fixtures, first install the two mounting screws in strap. Any remaining tapped hole may be used for the ground screw.

Chain Hung Fixtures
Loop fixture ground wire **(E)** (typically copper or green plastic coated) under the head of the ground screw **(2)** on fixture mounting strap **(1)** and connect to the loose end of the fixture ground wire directly to the ground wire of the building system with appropriately sized twist-on connectors - see **Drawing 2**.

Post-Mount Fixtures
Connect fixture ground wire **(E)** (typically copper or green plastic coated) to power supply ground with appropriately sized twist-on connector inside post. Cover open end of connector with silicone sealant to form a watertight seal - see **Drawing 3**.
