

Architectural Design Series Concealed Flush Valve

1801D60TR

Specifications

Front Accessible Rough-In Box

• Flush Volume: Adjustable - Factory Set @ 1.6 gpf (6.0 Lpf)

Adjustable Flush Volume, Infrared Sensor, Chrome Finish, Battery Operated with a 5 Year Battery Life, Water Closet Fixture, Electronic Manual Override,

Sensor Type: Infrared

Description

· Finish: Chrome

· Power Type: Battery Operated - (4 'C' cell batteries included)

Battery Life: 5 YearsFixture Type: Water ClosetOverride: Electronic Manual

Rough-In Box: Front Accessible

Features

Cover with integral sensor

· Vandal-resistant mounting plate, installed with single hidden screw

· No visible mounting hardware

· TRIM MODELS - Supplied as sensor and override button attached to cover

· Preset blocking time, built-in activation delay

· Micro-adjustable by electronical setting from the factory set volume

· Oversized ADA compliant push button

Optional Accessories

 060683A - 24 VAC to 6.4 VDC Converter - (Supplied standard on Hardwire Operated models)

Complies With

ASSE 1037/ ASME A112.1037/ CSA B125.37

ICC/ANSI A117.1

(Contact Delta Representative for State and/or Local Approvals)

Operation

- · Hands free touch-less operation
- · Power function light
- Selectable sensing distance 24" to 56" (610 to 1422 mm) in 8" (203 mm) increments factory set to 40" (1016 mm)
- · 12 seconds blocking time

Notes

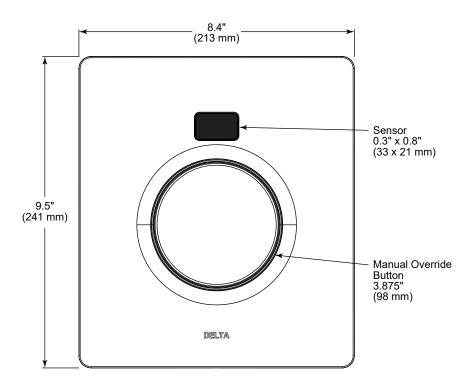

· Rough-in (1800D60RI) ordered separately

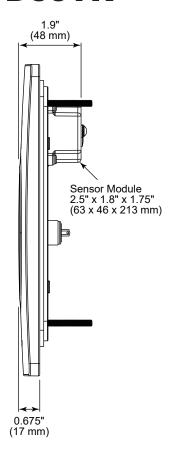

Architectural Design Series Concealed Flush Valve

1801D60TR

Delta Commercial flushometer valves are designed to operate at a supply pressure between 20 psi and 125 psi in accordance with ASSE 1037/ASME A112.1037/CSA B125.37. At high water pressures, splash out, noise or reduced life of plumbing components may be observed with a few models of water closet or urinal fixtures. To minimize, or eliminate these effects, select a different model of water closet or urinal fixture from the same or different manufacturer, or install a pressure reducing valve. If the installation does not allow for either of these options, the ball valve adjustment may be used to reduce peak flow to the valve.
